

AI gave you a score. Where's the evidence to back it up?

Hiring decisions need more than numbers.
They need proof.

Don't just score candidates. Show what they're good at.

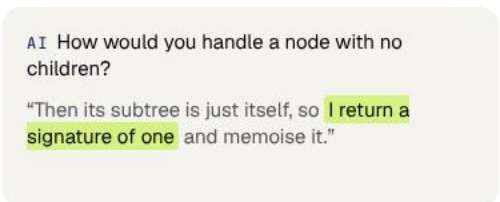

OnScreen maps candidate performance to your evaluation rubric, with scores across role-specific competencies.

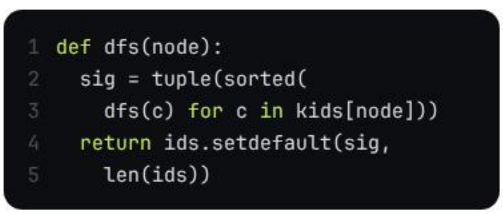

Every score should have proof behind it.

See what actually happened in the interview:

01 Full transcripts with key exchanges highlighted.

02 Actual code written by the candidate.

```
def dfs(node):
  sig = tuple(sorted(
    dfs(c) for c in kids[node]))
  return ids.setdefault(sig,
    len(ids))
```

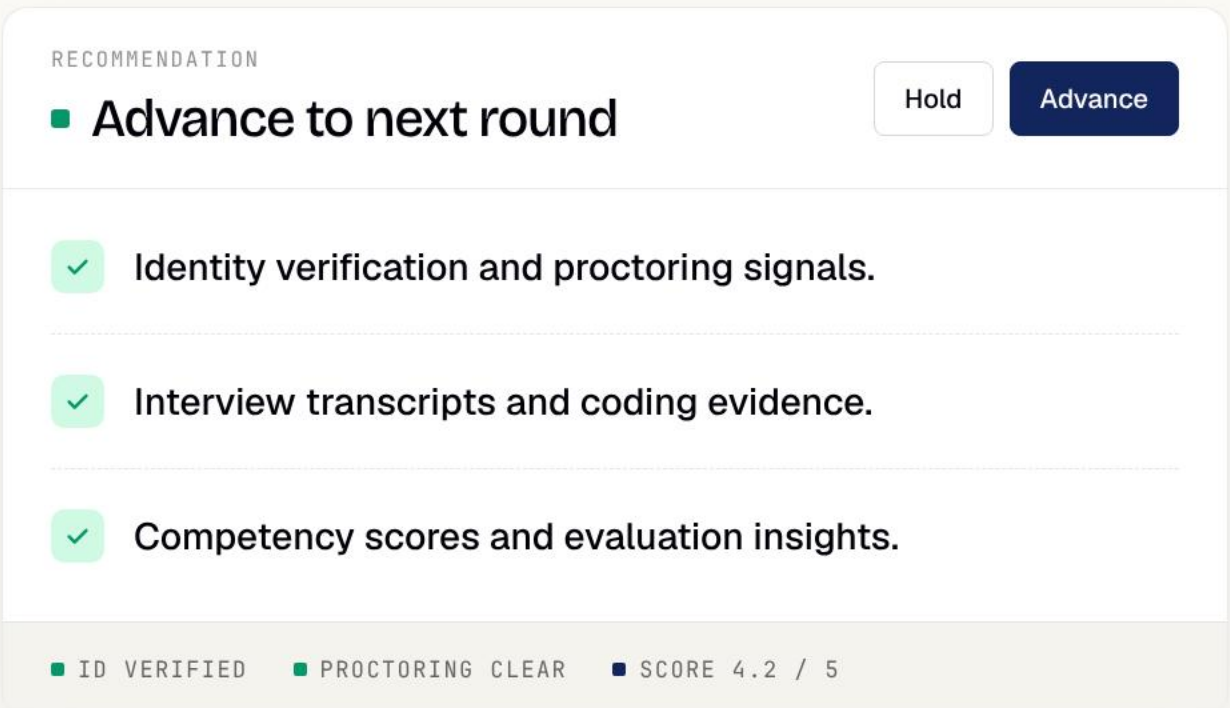

03 AI-powered evaluation of code quality, correctness, and problem-solving approach.

No unexplained scores. Just reviewable evidence.

AI provides the insights.
Your team makes the call.

Get structured recommendations backed by:

No black-box decisions. Just evidence-backed hiring.
